## Updating Grub

Due to my system's configuration, when updating Grub I need to use the `--removable` flag. I believe this is due to secure boot not being enabled.

To update grub post-install I need to run:

```
sudo grub-install --target x86_64-efi --efi-directory /boot --removable
sudo grub-mkconfig -o /boot/grub/grub.cfg
```

Of course the paths will vary depending on your system's configuration, but this is as of now as I installed via `archinstall`, which as the grub efi file at `/boot/EFI/B00T/B00TX64.EFI`.
